envelope (By similarity).

-- DOMAIN: The BH4 domain is required for anti-apoptotic activity. The BH1 and BH2 domains are required for both heterodimerization with other Bcl2 family members and for repression of cell death.

-- PTM: Proteolytically cleaved by caspases during apoptosis (By similarity). The cleaved protein, lacking the BH4 domain, has prospectic activity (By similarity).

-- SIMILARITY: Contains 1 Bcl-2 homology 1 (BH1) domain.

-- SIMILARITY: Contains 1 Bcl-2 homology 2 (BH2) domain.

-- SIMILARITY: Contains 1 Bcl-2 homology 3 (BH3) domain.

-- SIMILARITY: Contains 1 Bcl-2 homology 4 (BH4) domain.

-- SIMILARITY: Belongs to the Bcl-2 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  regulate cell death by blocking the voltage-dependent anion channel (VDAC) by binding to it and preventing the release of the caspase activator, cytochrome o, from the mitochondrial membrane. SUBUNIT: Bcl-X(L) forms heterodimers with BAX, BAK and Bcl-2 (By similarity). Heterodimerization with BAX does not seem to be required for anti-apoptotic activity (By similarity). Isoform Bcl-X(L) binds to Siva isoform 1 (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              FUNCTION: Potent inhibitor of cell death. Isoform Bcl-X(L) and apoptotic activity is inhibited by association with SIVA isofoli. Inhibits activation of caspases (By similarity). Appears to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        31:147-158(1999)

In contrast, Bcl-x(I) is found in tissues containing long-lived postmitotic cells, such as adult brain.

DOMAIN: The BH4 domain is required for anti-apoptotic activity. The BH1 and BH2 domains are required for both heterodimerization with other Bcl2 family members and for repression of cell death. PTM: Proteolytically cleaved by caspases during apoptosis. The cleaved protein, lacking the BH4 domain, has pro-apoptotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           apoptotic activity is inhibited by association with SIVA isoform 1. Inhibits activation of caspases (By similarity). Appears to regulate cell death by blocking the voltage dependent amion channel (UDAC) by binding to it and preventing the release of the caspase activator, cytochrome c, from the mitochondrial membrane. The Bcl-X(S) isoform promotes apoptosis.

SUBUNIT: Bcl-X(L) forms beterodimers with BAX, BAK and Bcl-2. Heterodimerization with BAX does not seem to be required for antiapoptotic activity. Isoform Bcl-X(L) binds to Siva isoform 1.

SUBCLIJULAR LOCATION: Mitochondrial membranes and perinuclear

"Genomic organization, promoter region analysis, and chromosome incendence organization of the mouse bel-x gene.";
L. Immunol. 158:4750-4757(1997).
C. -!-FUNCTION: Potent inhibitor of cell death. Isoform Bcl-X(L) anti-promoter activity is inhibited by association with SIVA isoform in Inhibits activation of caspases (By similarity). Appears to regulate cell death by blocking the voltage-dependent anion channel (VDAC) by binding to it and preventing the release of the caspase activator, cytochrome c, from the mitochondrial membrane.
C. -!- SUBUNIT: Bcl-X(S) isoform promotes apoptosis.
C. -!- SUBUNIT: Bcl-X(L) forms heterodimers with BAX, BAK and Bcl-2 (By similarity). Heterodimers heterodimers with BAX does not seem to be required for anti-apoptotic activity (By similarity). Isoform Bcl-X(L) binds to Siva isoform 1 (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MOUSE

Endocrinology 136:232-241(1995).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  channnel (VDAC) by binding to it and preventing the release of the caspase activator, cytochrome c, from the mitochondrial membrane. The Bcl-X(S) and Bcl-X(beta) isoforms promote apoptosis.

SUBUNIT: Bcl-X(L) forms heterodimers with BAX, BAK and Bcl-2 (By similarity). Heterodimerization with BAX does not seem to be required for anti-apoptotic activity (By similarity). Isoform Bcl-X(L) binds to Siva isoform 1 (By similarity).

SUBCELIULAR LOCATION: Mitochondrial membranes and perinuclear
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               IsoId=P53563-3; Sequence=VSP 000521;
TISSUE SPECIFICITY: Expressed in most tissues. Bcl-X(beta) is specifically expressed in cerebellum, heart, and thymus. In the ovary, the predominant form is Bcl-X(L), with a small but detectable level of Bcl-X(S).

DOMAIN: The BH4 domain is required for anti-apoptotic activity. The BH1 and BH2 domains are required for both heterodimerization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SIMILARITY:

THEATH TO THE THEATH 
the apoptosis-activating factor (APAF-1) (By similarity) SUBUNIT: Forms homodimers, and heterodimers with BAX, BAI Bcl-X(L). Heterodimerization with BAX requires intact BHI
                                                       FUNCTION: Suppresses apoptosis in a variety of cell systems including factor-dependent lymphohematopoietic and neural cells. Regulates cell death by controlling the mitochondrial membrane permeability. Appears to function in a feedback loop system with caspases. Inhibits caspase activity either by preventing the release of cytochrome c from the mitochondria and/or by binding release of cytochrome c from the mitochondria and/or by binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 190

PTM: Phosphorylation/dephosphorylation on Ser-70 regulates Bcl2 anti-apoptotic activity. Growth factor-stimulated phosphorylation on Ser-70 by PKC is required for the anti-apoptosis activity and occurs during the G2/M phase of the cell cycle (By similarity). In the absence of growth factors, Bcl2 appears to be phosphorylated by other protein kinases such as ERKs and stress-activated by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PTM: Proteolytically cleaved by caspases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          similarity).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         "Expression of members of the bcl-2 gene family in the immature : ovary: equine chorionic gonadotropin-mediated inhibition of granucell apoptosis is associated with decreased bax and constitutive bcl-2 and bcl-xlong messenger ribonucleic acid levels."; [3]
membrane of the nuclear envelope and the endoplasmic reticulum.

-! TISSUE SPECIFICITY: Expressed in a variety of tissues, with highest levels in reproductive tissues. In the adult brain, expression is localized in mitral cells of the olfactory bulb, granule and pyramidal neurons of hippocampus, pontine nuclei, cerebellar granule neurons, and in ependymal cells. In prenatal brain, expression is higher and localized in the neuroepithelium and in the cortical plate.

-!- DOMAIN: The BH4 domain is required for anti-apoptotic activity and for interaction with RAF-1 (By similarity).

-!- PTM: Phosphorylation/dephosphorylation on Ser-70 regulates Bcl2 anti-apoptotic activity. Growth factor-stimulated phosphorylation on Ser-70 by PKC is required for the anti-apoptosis activity and

SUBUNIT: Forms homodimers, and heterodimers with BAX, BAD, BAK and Bcl-X(L). Heterodimerization with BAX requires intact BH1 and BH2 domains, and is necessary for anti-apoptotic activity. Also interacts with APAF-1, RAF-1 and TP53BP2 (By similarity).
SUBCELLULAR LOCATION: Outer mitochondrial membrane, intracellular
                                                                                                                                                                                                                                                                                                                                                 FUNCTION: Suppresses apoptosis in a variety of cell systems including factor-dependent lymphohematopoietic and neural cells. Regulates cell death by controlling the mitochondrian membrane permeability. Appears to function in a feedback loop system with caspases. Inhibits caspase activity either by preventing the release of cytochrome c from the mitochondria and/or by binding t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RAT

In the absence of growth factors, Bcl2 appears to be phosphorylated by other protein kinases such as ERKs and stress-activated kinases.

Dephosphorylated by protein phosphatase 2A (PP2A) (By similarity).

-!- PTM: Proteolytically cleaved by caspases during apoptosis. The cleaved protein, lacking the BH4 domain, has pro-apoptotic activity, causes the release of cytochrome c into the cytosol promoting further caspase activity (By similarity).

-!- SIMILARITY: Contains 1 Bcl-2 homology 1 (BH1) domain.

-!- SIMILARITY: Contains 1 Bcl-2 homology 3 (BH2) domain.

-!- SIMILARITY: Contains 1 Bcl-2 homology 4 (BH4) domain.

-!- SIMILARITY: Contains 1 Bcl-2 homology 4 (BH4) domain.

                                IsoId=P10417-2; Sequence=VSP 000513; TISSUB SPECIFICITY: Expressed In a var DOMAIN: The BH4 domain is required for interaction with RAF-1.
                                                                                                                                          membrane of the nuclear ALTERNATIVE PRODUCTS: Event=Alternative splici
                                                                                                                                                                                                                      caspases. Inhibits caspase activity either by preventing the release of cytochrome c from the mitochondria and/or by binding the apoptosis-activating factor (APAF-1).

SUBUNIT: Forms homodimers, and heterodimers with BAX, BAD, BAK ar Bcl-X(L). Heterodimerization with BAX requires intact BHI and BHZ domains, and is necessary for anti-apoptotic activity. Interacts with TP53BP2 (By similarity). Also interacts with APAF-1 and

In the absence of growth factors, Bc12 appears to be phosphorylated by other protein kinases such as ERKs and stress-activated kinases. Dephosphorylated by protein phosphatase 2A (PP2A).

PTM: Proteclytically cleaved by caspases during apoptosis. The cleaved protein, lacking the BH4 domain, has pro-apoptotic activity, causes the release of cytochrome c into the cytosol

```
protein kinase pathway normally activated at G(2)/M.";

Mol. Cell. Biol. 19:8469-8478(1999)
-1- FUNCTION: Suppresses apoptosis in a variety of cell systems including factor-dependent lymphohematopoletic and neural cells. Regulates cell death by controlling the mitochondrial membrane permeability. Appears to function in a feedback loop system with caspases. Inhibits caspase activity either by preventing the release of cytochrome c from the mitochondria and/or by binding to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Naumovski L., Cleary M.L.;

the apoptosis-activating factor (APAF-1).
SUBUNIT: Forms homodimers, and heterodimers with BAX, BAD,
Bcl-X(L). Heterodimerization with BAX requires intact BH1 a
domains, and is necessary for anti-apoptotic activity (By
similarity). Also interacts with APAF-1, RAF-1 and TP53BP2.

                                                                                                                                                                            the appoptosis-activating factor (APAP-1) (By similarity).

-!- SUBUNIT: Forms homodimers, and heterodimers with BAX, BAA, BAK and Bcl-X(L). Heterodimerization with BAX requires intact BH1 and BH2 domains, and is necessary for anti-appototic activity. Also interacts with APAP-1, RAF-1 and TP53BP2 (By similarity).

-!- SUBCELLULAR LOCATION: Outer mitochondrial membrane, intracellular membrane of the nuclear envelope and the endoplasmic reticulum.

-!- DOMAIN: The BH4 domain is required for anti-appototic activity and for interaction with RAP-1 (By similarity).

-!- PTM: Phosphorylation/dephosphorylation on Ser-70 regulates Bcl2 anti-appoptotic activity. Growth factor-stimulated phosphorylation on Ser-70 by PKC is required for the anti-appotosis activity and occurs during the G2/M phase of the cell cycle (By similarity). In the absence of growth factors, Bcl2 appears to be phosphorylated by other protein kinases such as ERKs and stress-activated kinases (By similarity). Dephosphorylated by protein phosphatase 2A (PP2A) of the similarity in the cell cycle (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SEQUENCE FROM N.A., MEDLINE=21092839; P

Biophys. Res. Commun. 281:404-408(2001).
FUNCTION: Suppresses apoptosis in a variety of cell systems including factor-dependent lymphohematopoietic and neural cells. Regulates cell death by controlling the mitochondrial membrane permeability. Appears to function in a feedback loop system with caspases. Inhibits caspase activity either by preventing the release of cytochrome c from the mitochondria and/or by binding trelease of cytochrome c from the mitochondria and/or by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               caspase-3.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CRILO

"Cloning, characterization and expression of two Xenopus bcl-2-like cell-survival genes.";

Gene 158:171-179(1995).
-!- FUNCTION: Confers strong protection against cell death.
-!- SUBCELULAR LOCATION: Membrane-bound (Potential).
-!- DEVELOPMENTAL STAGE: Developmental regulation only occurs in the brain of mid-metamorphosic to post-metamorphosic tadpoles and adults, where an increase of several fold has been observed.
-!- SIMILARITY: Contains 1 Bcl-2 homology 1 (BH1) domain.
-!- SIMILARITY: Contains 1 Bcl-2 homology 2 (BH2) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This SWISS-PROT entry is copyright. ```

The present sequence is human Bcl-w, a pro-survival member of the Bcl-2 family which is widely expressed and which is essential for spermatogenesis. The invention relates generally to a method of treatment and to an animal model for the identification of molecules and genetic sequences useful for inducing or reducing fertility of male animals. Methods are provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bcl-w gene (see AXX25132-35) or in a gene associated with bcl-w. Such animals have disorganised seminferous tubules and are substantially infertile, but possess no other major abnormalities as determined by histological examination. They can be used to screen for therapeutic molecules

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                facilitating
                                                                                              The invention discloses a composition comprising two or more isolated rat or human polymucleotides or a polymucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polymucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially a more applied in a parisal exhibitor of the results.
                                                                                                                                                                                                                                                                                                               New composition comprising preparing a medicament for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              polynucleotides, a method for producing a pharmaceutical composition, a composition or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that composition comprising the one or more polypeptides its activity is useful for preparing a medicament for treating compliance its activity is useful for preparing a medicament for treating compliance its activity is useful for preparing a medicament for treating compliance (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches 193;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
